CHAPTER 1

Introduction to Parallel Computing 1

1.1 Motivating Parallelism 2
   1.1.1 The Computational Power Argument – from Transistors to FLOPS 2
   1.1.2 The Memory/Disk Speed Argument 3
   1.1.3 The Data Communication Argument 4

1.2 Scope of Parallel Computing 4
   1.2.1 Applications in Engineering and Design 4
   1.2.2 Scientific Applications 5
   1.2.3 Commercial Applications 5
   1.2.4 Applications in Computer Systems 6

1.3 Organization and Contents of the Text 6

1.4 Bibliographic Remarks 8

Problems 9

CHAPTER 2

Parallel Programming Platforms 11

2.1 Implicit Parallelism: Trends in Microprocessor Architectures 12
   2.1.1 Pipelining and Superscalar Execution 12
   2.1.2 Very Long Instruction Word Processors 15

2.2 Limitations of Memory System Performance* 16
   2.2.1 Improving Effective Memory Latency Using Caches 17
   2.2.2 Impact of Memory Bandwidth 18
   2.2.3 Alternate Approaches for Hiding Memory Latency 21
2.2.4 Tradeoffs of Multithreading and Prefetching 23
2.3 Dichotomy of Parallel Computing Platforms 24
  2.3.1 Control Structure of Parallel Platforms 25
  2.3.2 Communication Model of Parallel Platforms 27
2.4 Physical Organization of Parallel Platforms 31
  2.4.1 Architecture of an Ideal Parallel Computer 31
  2.4.2 Interconnection Networks for Parallel Computers 32
  2.4.3 Network Topologies 33
  2.4.4 Evaluating Static Interconnection Networks 43
  2.4.5 Evaluating Dynamic Interconnection Networks 44
  2.4.6 Cache Coherence in Multiprocessor Systems 45
2.5 Communication Costs in Parallel Machines 53
  2.5.1 Message Passing Costs in Parallel Computers 53
  2.5.2 Communication Costs in Shared-Address-Space Machines 61
2.6 Routing Mechanisms for Interconnection Networks 63
2.7 Impact of Process-Processor Mapping and Mapping Techniques 65
  2.7.1 Mapping Techniques for Graphs 66
  2.7.2 Cost-Performance Tradeoffs 73
2.8 Bibliographic Remarks 74
Problems 76

CHAPTER 3

Principles of Parallel Algorithm Design 85

3.1 Preliminaries 86
  3.1.1 Decomposition, Tasks, and Dependency Graphs 86
  3.1.2 Granularity, Concurrency, and Task-Interaction 89
  3.1.3 Processes and Mapping 93
  3.1.4 Processes versus Processors 94
3.2 Decomposition Techniques 95
  3.2.1 Recursive Decomposition 95
  3.2.2 Data Decomposition 97
  3.2.3 Exploratory Decomposition 105
  3.2.4 Speculative Decomposition 107
  3.2.5 Hybrid Decompositions 109
3.3 Characteristics of Tasks and Interactions 110
  3.3.1 Characteristics of Tasks 110
  3.3.2 Characteristics of Inter-Task Interactions 112
3.4 Mapping Techniques for Load Balancing 115
  3.4.1 Schemes for Static Mapping 117
  3.4.2 Schemes for Dynamic Mapping 130
3.5  Methods for Containing Interaction Overheads  132
  3.5.1 Maximizing Data Locality  132
  3.5.2 Minimizing Contention and Hot Spots  134
  3.5.3 Overlapping Computations with Interactions  135
  3.5.4 Replicating Data or Computations  136
  3.5.5 Using Optimized Collective Interaction Operations  137
  3.5.6 Overlapping Interactions with Other Interactions  138

3.6  Parallel Algorithm Models  139
  3.6.1 The Data-Parallel Model  139
  3.6.2 The Task Graph Model  140
  3.6.3 The Work Pool Model  140
  3.6.4 The Master-Slave Model  141
  3.6.5 The Pipeline or Producer-Consumer Model  141
  3.6.6 Hybrid Models  142

3.7  Bibliographic Remarks  142

Problems  143

CHAPTER  4

Basic Communication Operations  147

4.1  One-to-All Broadcast and All-to-One Reduction  149
  4.1.1 Ring or Linear Array  149
  4.1.2 Mesh  152
  4.1.3 Hypercube  153
  4.1.4 Balanced Binary Tree  153
  4.1.5 Detailed Algorithms  154
  4.1.6 Cost Analysis  156

4.2  All-to-All Broadcast and Reduction  157
  4.2.1 Linear Array and Ring  158
  4.2.2 Mesh  160
  4.2.3 Hypercube  161
  4.2.4 Cost Analysis  164

4.3  All-Reduce and Prefix-Sum Operations  166

4.4  Scatter and Gather  167

4.5  All-to-All Personalized Communication  170
  4.5.1 Ring  173
  4.5.2 Mesh  174
  4.5.3 Hypercube  175

4.6  Circular Shift  179
  4.6.1 Mesh  179
  4.6.2 Hypercube  181
CHAPTER 6
Programming Distributed Shared Memory Platforms

6.3.1 Starting and Terminating the MPI Library 242
6.3.2 Communicators 242
6.3.3 Getting Information 243
6.3.4 Sending and Receiving Messages 244
6.3.5 Example: Odd-Even Sort 248
6.4 Topologies and Embedding 250
6.4.1 Creating and Using Cartesian Topologies 251
6.4.2 Example: Cannon's Matrix-Matrix Multiplication 253
6.5 Overlapping Communication with Computation 255
6.5.1 Non-Blocking Communication Operations 255
6.6 Collective Communication and Computation Operations 260
6.6.1 Barrier 260
6.6.2 Broadcast 260
6.6.3 Reduction 261
6.6.4 Prefix 263
6.6.5 Gather 263
6.6.6 Scatter 264
6.6.7 All-to-All 265
6.6.8 Example: One-Dimensional Matrix-Vector Multiplication 266
6.6.9 Example: Single-Source Shortest-Path 268
6.6.10 Example: Sample Sort 270
6.7 Groups and Communicators 272
6.7.1 Example: Two-Dimensional Matrix-Vector Multiplication 274
6.8 Bibliographic Remarks 276
Problems 277

CHAPTER 7
Programming Shared Address Space Platforms 279

7.1 Thread Basics 280
7.2 Why Threads? 281
7.3 The POSIX Thread API 282
7.4 Thread Basics: Creation and Termination 282
7.5 Synchronization Primitives in Pthreads 287
7.5.1 Mutual Exclusion for Shared Variables 287
7.5.2 Condition Variables for Synchronization 294
7.6 Controlling Thread and Synchronization Attributes 298
7.6.1 Attributes Objects for Threads 299
7.6.2 Attributes Objects for Mutexes 300
CHAPTER  8

Dense Matrix Algorithms  337

8.1 Matrix-Vector Multiplication  337
  8.1.1 Rowwise 1-D Partitioning  338
  8.1.2 2-D Partitioning  341
8.2 Matrix-Matrix Multiplication  345
  8.2.1 A Simple Parallel Algorithm  346
  8.2.2 Cannon’s Algorithm  347
  8.2.3 The DNS Algorithm  349
8.3 Solving a System of Linear Equations  352
  8.3.1 A Simple Gaussian Elimination Algorithm  353
  8.3.2 Gaussian Elimination with Partial Pivoting  366
  8.3.3 Solving a Triangular System: Back-Substitution  369
  8.3.4 Numerical Considerations in Solving Systems of Linear Equations  370
8.4 Bibliographic Remarks  371
Problems  372

CHAPTER  9

Sorting  379

9.1 Issues in Sorting on Parallel Computers  380
  9.1.1 Where the Input and Output Sequences are Stored  380
  9.1.2 How Comparisons are Performed  380
CHAPTER 10

Graph Algorithms 429

10.1 Definitions and Representation 429
10.2 Minimum Spanning Tree: Prim’s Algorithm 432
10.3 Single-Source Shortest Paths: Dijkstra’s Algorithm 436
10.4 All-Pairs Shortest Paths 437
  10.4.1 Dijkstra’s Algorithm 438
  10.4.2 Floyd’s Algorithm 440
  10.4.3 Performance Comparisons 445
10.5 Transitive Closure 445
10.6 Connected Components 446
  10.6.1 A Depth-First Search Based Algorithm 446
10.7 Algorithms for Sparse Graphs 450
  10.7.1 Finding a Maximal Independent Set 451
  10.7.2 Single-Source Shortest Paths 455
10.8 Bibliographic Remarks 462
  Problems 465
CHAPTER 11
Search Algorithms for Discrete Optimization
Problems 469
11.1 Definitions and Examples 469
11.2 Sequential Search Algorithms 474
   11.2.1 Depth-First Search Algorithms 474
   11.2.2 Best-First Search Algorithms 478
11.3 Search Overhead Factor 478
11.4 Parallel Depth-First Search 480
   11.4.1 Important Parameters of Parallel DFS 482
   11.4.2 A General Framework for Analysis of Parallel DFS 485
   11.4.3 Analysis of Load-Balancing Schemes 488
   11.4.4 Termination Detection 490
   11.4.5 Experimental Results 492
   11.4.6 Parallel Formulations of Depth-First Branch-and-Bound Search 495
   11.4.7 Parallel Formulations of IDA* 496
11.5 Parallel Best-First Search 496
11.6 Speedup Anomalies in Parallel Search Algorithms 501
   11.6.1 Analysis of Average Speedup in Parallel DFS 502
11.7 Bibliographic Remarks 505
Problems 510

CHAPTER 12
Dynamic Programming 515
12.1 Overview of Dynamic Programming 515
12.2 Serial Monadic DP Formulations 518
   12.2.1 The Shortest-Path Problem 518
   12.2.2 The 0/1 Knapsack Problem 520
12.3 Nonserial Monadic DP Formulations 523
   12.3.1 The Longest-Common-Subsequence Problem 523
12.4 Serial Polyadic DP Formulations 526
   12.4.1 Floyd's All-Pairs Shortest-Paths Algorithm 526
12.5 Nonserial Polyadic DP Formulations 527
   12.5.1 The Optimal Matrix-Parenthesization Problem 527
12.6 Summary and Discussion 530
12.7 Bibliographic Remarks 531
Problems 532
