Spatial-temporal Networks is the current trend for Spatial Database, and it is a totally new chapter for the book. The author gives out a really good organization, which is consistent with the organization of chapter Spatial Networks. It is complete and comprehensive for an individual chapter to introduce the Spatio-temporal Network.

1. What is the contribution or originality of the paper as a survey?

This chapter proposal provides a comprehensive introduction for Spatio-temporal networks. Spatio-temporal Network has become a necessary and important component of Spatial Database. Therefore, a chapter to introduce Spatio-temporal network is required for this book.

2. Is the survey complete? If you believe there are items to be added or eliminated, specify which ones.

This chapter is complete enough except for a summary in the end. And if it is possible, some SQL clause for Spatio-temporal network database can be added to give an initial view for common audience.

3. Is the paper clearly written and well organized?

This chapter is clearly written and well organized.

4. Are the references complete and correctly cited in the text? Supply missing references and/or indicate more appropriate ones.

It may look better to add the references at the end.

5. If the paper is too long for its category, how can it be shortened?

Personally, I think it is good enough for a comprehensive introduction for Spatio-temporal network.
