Vipin Kumar is a Regents Professor and holds William Norris Chair in the department of Computer Science and Engineering at the University of Minnesota. Kumar's current research interests include data mining, high-performance computing, and their applications in Climate/Ecosystems and health care. Kumar is the Lead PI of a 5-year, \$10 Million project, "Understanding Climate Change - A Data Driven Approach", funded by the NSF's Expeditions in Computing program that is aimed at pushing the boundaries of computer science research. He also served as the Director of Army High Performance Computing Research Center (AHPARC) from 1998 to 2005. His research has resulted in the development of the concept of isoefficiency metric for evaluating the scalability of parallel algorithms, as well as highly efficient parallel algorithms and software for sparse matrix factorization (PSPASES) and graph partitioning (METIS, ParMetis, hMetis). He has authored over 300 research articles, and has coedited or coauthored 11 books including widely used text books "Introduction to Parallel Computing" and "Introduction to Data Mining", that have been translated into many languages, and have multiple international editions.

Kumar has delivered over 75 keynotes, plenary, or distinguished/endowed lectures at major conferences/workshops and academic institutions. He is routinely asked to serve on review panels by federal agencies such as DOE, DHS, DOD, and NSF. Kumar has served as Honorary Chair, General Chair, and Program Chair for many international conferences and workshops in the area of data mining and parallel computing, including 2015 IEEE International Conference on Big Data, IEEE International Conference on Data Mining (2002) and International Parallel and Distributed Processing Symposium (2001). Kumar co-founded SIAM International Conference on Data Mining and served as a founding co-editor-in-chief of Journal of Statistical Analysis and Data Mining (Data Science Journal of the American Statistical Association). Currently, Kumar serves on the steering committees of the SIAM International Conference on Data Mining and the IEEE International Conference on Data Mining, on Board of Directors of ACM SIGBio (Special Group on Bioinformatics, Computation Biology, and Biomedical Medicine), and is series editor for the Data Mining and Knowledge Discovery Book Series published by CRC Press/Chapman Hall.

B. SOFTWARE Projects by Kumar's Group (incomplete)

The MINDS (Minnesota Intrusion Detection System) project at the AHPCRC is developing a suite of data mining techniques to automatically detect attacks against computer networks and systems. MINDS is currently being used to monitor over 40,000 computers at the University of Minnesota. In addition, it is an integral part of the Army's Interrogator architecture that is used to analyze network traffic from multiple DOD sites around the country at the Army Research Laboratory's Center for Intrusion Monitoring and Protection. MINDS routinely detects novel intrusions, policy violations and insider abuse that are missed by other widely used tools. A National Science Foundation's (NSF) news clip on MINDS is available at <http://www.nsf.gov/od/lpa/news/04/tip040414.htm>.

PSPASES, an MPI-based portable library for computing Cholesky factorization of large sparse, has been used to solve some of the largest sparse linear systems that have been solved using direct methods.

Metis/ParMetis/hMetis (Serial and parallel graph-partitioning libraries developed by Kumar's group) are extensively used world-wide at academic institutions, national research labs (e.g., Los Alamos, Sandia, Lawrence Livermore, Army Research Lab, JPL), and commercial organizations under licensing agreement (e.g., HP, SUN, IBM, SGI, Boeing, Ford, Rockwell, NEC, Centric, Ansys, MSC, HKS, AEA, Adapco, Altair, CSAR, STAR Inc., NAG). These libraries have enabled parallel execution of some of the largest computational simulations performed to date, and are routinely included in various Unix distributions such as FreeBSD and Linux. In Fall 1996, the Army Research Office published a brochure on Metis celebrating its success in technology transfer, and summarizing its research accomplishments.
