Call for Papers

HotEmNets 2008

The Fifth Workshop on Embedded Networked Sensors

Charlottesville, Virginia, USA

Important Dates:

Papers Due: Feb 29th, 2008

Notification: April 27th, 2008

Camera Ready: May 4th, 2008

Conference: June 2-3, 2008

Organization Committee:

General Chair

John A. Stankovic, University of Virginia

Program Co-Chairs

Raj Rajkumar, CMU

Tian He, University of Minnesota

Publicity Chair

Radu Stoleru, TAMU

Local Arrangements Chair

Kamin Whitehouse, UVA

Technical Program Committee:

Anish Arora, Ohio State University.

Tarek F. Abdelzaher, UIUC

Andrew Campbell, Dartmouth College

Polly Huang, National Taiwan Univ.

Akos Ledeczi, Vanderbilt University

Qun Li, College of William and Mary

Yoshito Tobe, Tokyo Denki

University

Mark Yarvis, Intel Corporation

Ying Zhang, PARC

Gang Zhou, College of William and

Mary

Overview:

The Fifth Workshop on Embedded Networked Sensors (HotEmNets 2008) brings together wireless sensor network researchers from academic and industrial backgrounds to present groundbreaking results that will shed light on present and future research challenges. The workshop emphasizes results from experiments or deployments that quantify the challenges in the wireless sensor systems of today as well as early results from new ideas that introduce promising approaches that will define the challenges in the wireless sensor systems of tomorrow. We especially welcome papers reporting on results that refute common assumptions, deployment experiences, novel and original approaches, and, more generally, papers that will help inform and guide research.

The EmNets Program Committee discourages submissions that are short versions of papers that will be submitted to other conferences in the near future, since its goal is to engage the research community in a discussion of future challenges and issues.

Topics of interest include, but are not limited to:

- Validation/refutation of prior results
- Application experiences: measurements, lessons learned
- Future applications: requirements and challenges
- Hardware platforms, tradeoffs, and trends
- Data and network storage
- Delay-tolerant networking
- Management, debugging, and troubleshooting
- Network and software reliability
- Network and system architectures
- Software bug detection and tools
- Energy sources, scavenging, and low-power operation
- Human-Computer interfaces for sensornets
- Benchmarks and evaluation suites

Submission Guidelines:

- Papers should be submitted in Adobe PDF format.
- No longer than five pages in US letter or A4 paper size, including all text, figures, references, appendices, etc.
- Two column formatting.
- One-inch margins on all sides.
- Minimum 10-point font size (smaller fonts are acceptable for footnotes, references, and figure captions).
